TECHNICAL SKILLS

Languages: Java, Go, Python, TypeScript, JavaScript

Frameworks: React, Next.js, Redux, Node.js, Spring Boot, Django, FastAPI, HTMX, gRPC

Infrastructure: Docker, Kubernetes, Terraform, AWS, GitHub Actions, GitLab CI/CD, CircleCI

Databases: PostgreSQL, MySQL, SQLite, Qdrant

Other: Linux, Bash, Systemd, Grafana, PostHog, OpenCV

Certifications: Top Secret Clearance, CompTIA Security+

PROFESSIONAL EXPERIENCE

Vadar Alpha | Senior software engineer | Remote

Oct 2025 - Mar 2026

- Used spec driven AI development to develop decision analysis software using NextJs, Python, and DuckDB.
- Refactored frontend NextJs state management to generate quotes for clients 10x faster using caching and cache warming.
- Built a functional workflow creation backend that was used to model complex client decision trees while keeping the code reusable, and easy to read and maintain.
- Owned development and release cycle for a client code, ensuring it was ready for launch by writing performance load tests.

Raft | Senior software engineer | Remote | [Code URL](#)

Jun 2022 - Feb 2025

- Spearheaded CI/CD pipeline design and integration testing for multiple Kessel Run teams, leading to ownership of load and contract testing initiatives.
- Onboarded new engineering teams and trained teammates on GitLab CI/CD best practices, improving DevSecOps maturity across the organization.
- Introduced Redux Toolkit and modernized frontend architecture in a Java/Spring Boot/React/Postgres environment, improving development speed and maintainability.
- Led full-stack development for the TANF government project using Python, React, NGINX, and CircleCI, delivering secure and scalable government solutions.

Rebellion Defense | Product security engineer | Remote

Jul 2021 - Apr 2022

- Built a centralized GitLab CI/CD pipeline framework integrating the GitLab Compliance Framework to automate vulnerability detection and enforce security baselines across teams.
- Developed internal automation tools to streamline developer workflows and reduce manual effort.
- Collaborated on a week-long hackathon to deliver a full-stack real-time analytics dashboard.

F9 | Senior software engineer | Remote

Mar 2021 - Jul 2021

- Developed full-stack features for Air Force applications in the Kessel Run ecosystem, implementing event-sourcing workflows to support release lifecycles, data parity, and provenance.
- Migrated frontend codebase from JavaScript to TypeScript, and rewrote backend APIs to improve maintainability, scalability, and test coverage.

PERSONAL PROJECTS

WebRTC-Based Telepresence and Vision System

- Developed a low-latency video conferencing and control platform using Go, WebRTC, and HTMX that powers a custom-made raspberry pi based robot.
- Extended the system with a Go-based client using OpenCV for live object detection and computer vision, enabling future expansion into autonomous or assisted robotics.

EDUCATION

Eastern Washington University

2013-2016

- Algorithms, Data Structures, Design Patterns, Linear Algebra, Discrete Mathematics
